

ABSTRACT

An ink jet head (100) with a plurality of ink jetting units (12) enabling the easy filling of ink and an operation
5 for recovering from defective jetting, a method of manufacturing the ink jet head, and an ink jet recording device. The ink jet head (100) comprises a nozzle plate (1) in which a nozzle (2) jetting the ink is formed, a pressure application means applying a pressure to the
10 ink, a wall member (3) holding the nozzle plate (1), a headplate (13) holding the plurality of ink jetting units (12), sealing members (14) sealing clearances between the ink jetting units (12) and the head plate (13) so that air is not passed therethrough and movably supporting
15 the ink jetting units (12) on the head plate (13) by deforming by itself, and fixing members fixing the ink jetting units (12) to the head plate (13).
